

WHAT IS CLAIMED IS

1. A convectional radial electric warmer comprising:
an upper and a lower support base respectively having
plural fixing members, plural holes, and an upright wall at
one end and a flat wall at the other end, said lower support
5 base further fixed with a front foot frame and a rear foot
frame extending under said lower support base to let said
warmer stand on the ground:

plural heaters respectively consisting of plural heating
pieces, secured at an outer side of said upper and said lower
10 support base by said fixing members of said upper and said
lower support base:

a protective net consisting of plural pieces, secured
stably at the outer side of said heaters by said upper and
said lower support base:

15 an upper, a front and a rear cover respectively fixed on
the upper side, the front side and the rear side of said upper
and said lower support base with said upright walls and said
flat walls of said upper and said lower support base, said
upper cover having plural exhaust holes, said front cover
20 having a control switch.

2. The convectional radial electric warmer as
claimed in Claim 1, wherein said heaters are provided with
an electric heating film, which is made of concocted electric
resistance plasma and printed on an heat-enduring
25 insulating base by means of a net printing process and then

burned by a high temperature burning process.

3.The convectional radial electric warmer as claimed in
Claim 1, wherein a protective switch is fixed under said
front cover for automatically cutting off the power of said
5 warmer in case of said warmer inclining and falling down.
